DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. **Claim(s) 1-21** are rejected under 35 U.S.C. 102(e) as being anticipated by Bedingfield et al. (US 6,608,888 B2)

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding **claim(s) 1, 14, 20 and 21**, Bedingfield discloses a method of providing communications services (FIG. 1 and column 1, lines 25-27), comprising the steps of:

allowing a subscriber to create a data message (column 7, lines 11-16);

allowing the subscriber to associate the data message to an originating party and to a recipient (column 7, lines 18-27);

receiving a communication from the originating party (column 6, lines 4-10); and communicating the data message to the recipient via an Internet Protocol communications network (column 6, lines 1-3 and column 7, lines 44-55).

Regarding **claim(s) 2 and 15**, Bedingfield discloses a method, wherein the step of receiving the communication comprises receiving a telephone call intended to terminate at a telephone number associated with the subscriber (column 9, lines 34-48).

Regarding **claim(s) 3 and 16**, Bedingfield discloses a method, wherein the step of receiving the communication comprising receiving an electronic communication addressed to the subscriber (column 9, lines 34-48).

Regarding **claim(s) 4**, Bedingfield discloses a method, wherein the step of allowing the subscriber to create the data message comprises allowing the subscriber to create an audio message (column 9, lines 1-18).

Regarding **claim(s) 5**, Bedingfield discloses a method, wherein the step of allowing the subscriber to create the data message comprising allowing the subscriber to access a user interface via an Internet Protocol communications network, the user

interface prompting the subscriber to create the data message and to associate the data message to a recipient (column 6, lines 26-40).

Regarding **claim(s) 6**, Bedingfield discloses a method, wherein the step of allowing the subscriber to create the data message comprising allowing the subscriber to specify a time of day that the data message is communicated to the recipient (column 9, lines 26-33).

Regarding **claim(s) 7 and 17**, Bedingfield discloses a method, further comprising the step of allowing the subscriber to preview the data message (column 9, lines 1-18).

Regarding **claim(s) 8**, Bedingfield discloses a method, further comprising the step of allowing the subscriber to audibly preview the data message (column 9, lines 1-18).

Regarding **claim(s) 9**, Bedingfield discloses a method, further comprising the step of allowing the subscriber to visually preview the data message (column 9, lines 1-18).

Regarding **claim(s) 10 and 18**, Bedingfield discloses a method, further comprising the step of allowing the subscriber to attach a computer file to the data message (column 9, lines 26-33).

Regarding **claim(s) 11 and 19**, Bedingfield discloses a method, wherein the step of allowing the subscriber to create the data message comprises allowing the subscriber to record audio content (column 9, lines 1-18).

Regarding **claim(s) 12**, Bedingfield discloses a method, wherein the step of allowing the subscriber to create the data message comprises allowing the subscriber to input text (column 9, lines 26-33).

Regarding **claim(s) 13**, Bedingfield discloses a method, further comprising the step of accepting voice commands from the subscriber when creating the data message (column 9, lines 1-18).

Response to Arguments

3. Applicant's arguments with respect to **claim(s) 1-21** have been considered but are moot in view of the new ground(s) of rejection.
